

**All Fish** are **measured** based on “Total Length” from the tip of the snout or jaw (mouth closed) to the farthest extremity of the tail. Place the snout and 0” of tape against bulkhead (vertical surface) and run the measuring tape provided to you by the tournament committee straight down the linear length of the fish clearly showing the measurement at the pinched tail. Below is an example of a properly measured 26” bluefish.

Your photographic evidence of fish measurement must be done with the measuring tape provided by the tournament committee. When sending your submission to **781-901-1922**, text the picture in high quality so that the measurement can be clearly seen.

In the event of a tie, please also provide a girth measurement photo.
